MARS / AN ICONOGRAPHIC EXPEDITION

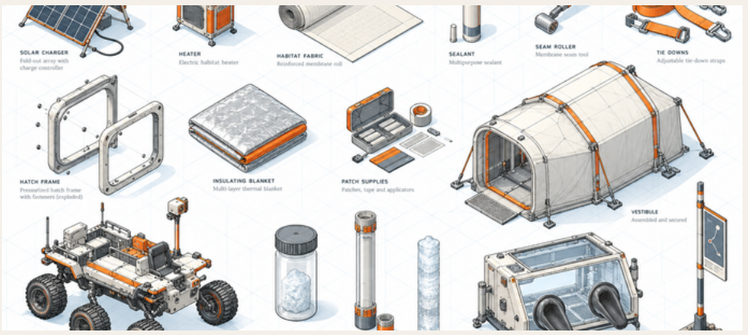

Twelve independent visual-language experiments for a 200-item combining game

01 Apollo-era technical illustration

02 Polar expedition sketchbook

03 Architectural / industrial isometric

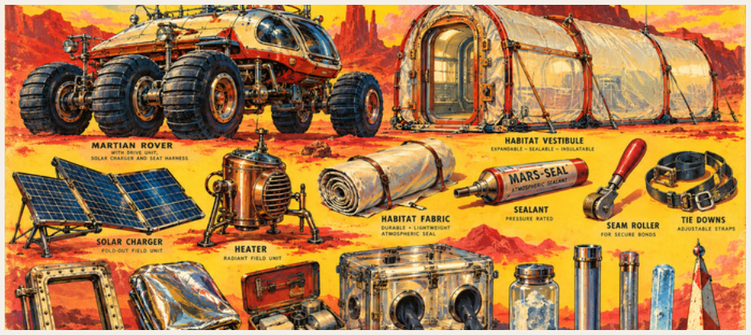

04 Photorealistic field objects

05 Mid-century industrial catalog

06 Soviet space-age book illustration

07 Golden-age science-fiction pulp

08 1970s paperback science-fiction art

09 Star Trek: 1960s television props

10 Star Wars: worn frontier equipment

11 Raygun Gothic / Streamline Moderne

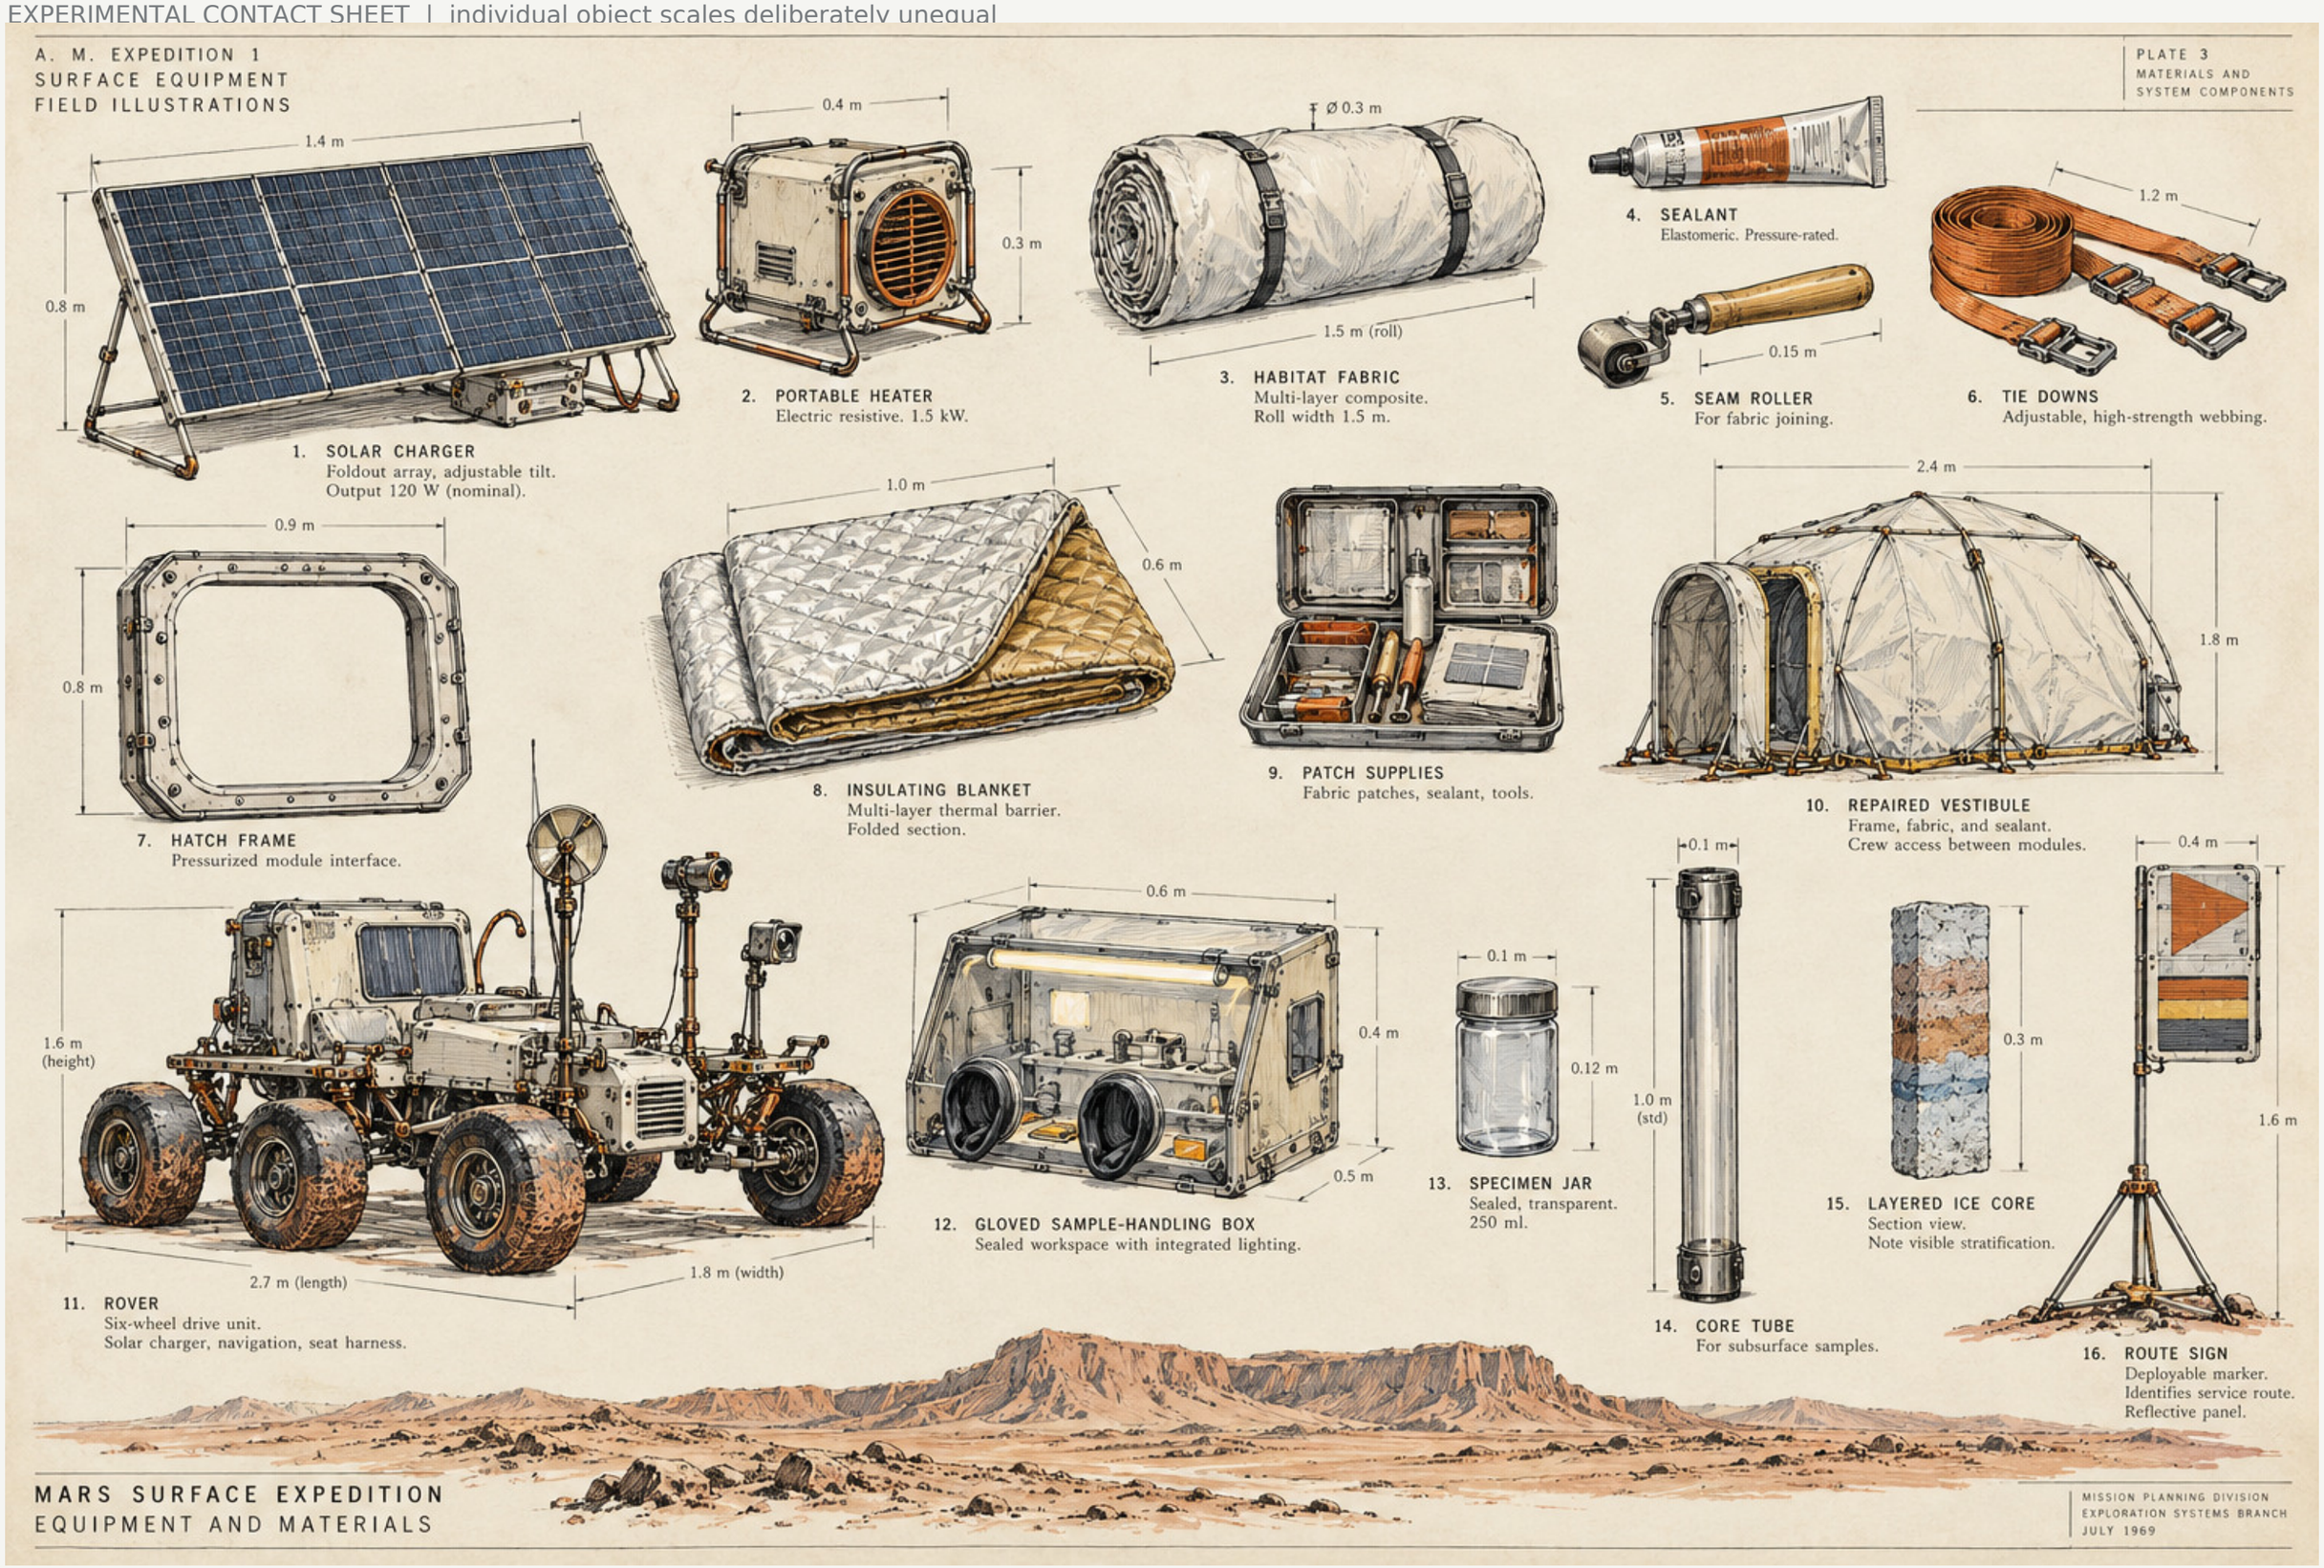

12 2001: A Space Odyssey industrial mode

Same class of objects in every study • different proportions, materials, marks and pictorial space

01 / Apollo-era technical illustration

EXPERIMENTAL CONTACT SHEET | individual object scales deliberately unequal

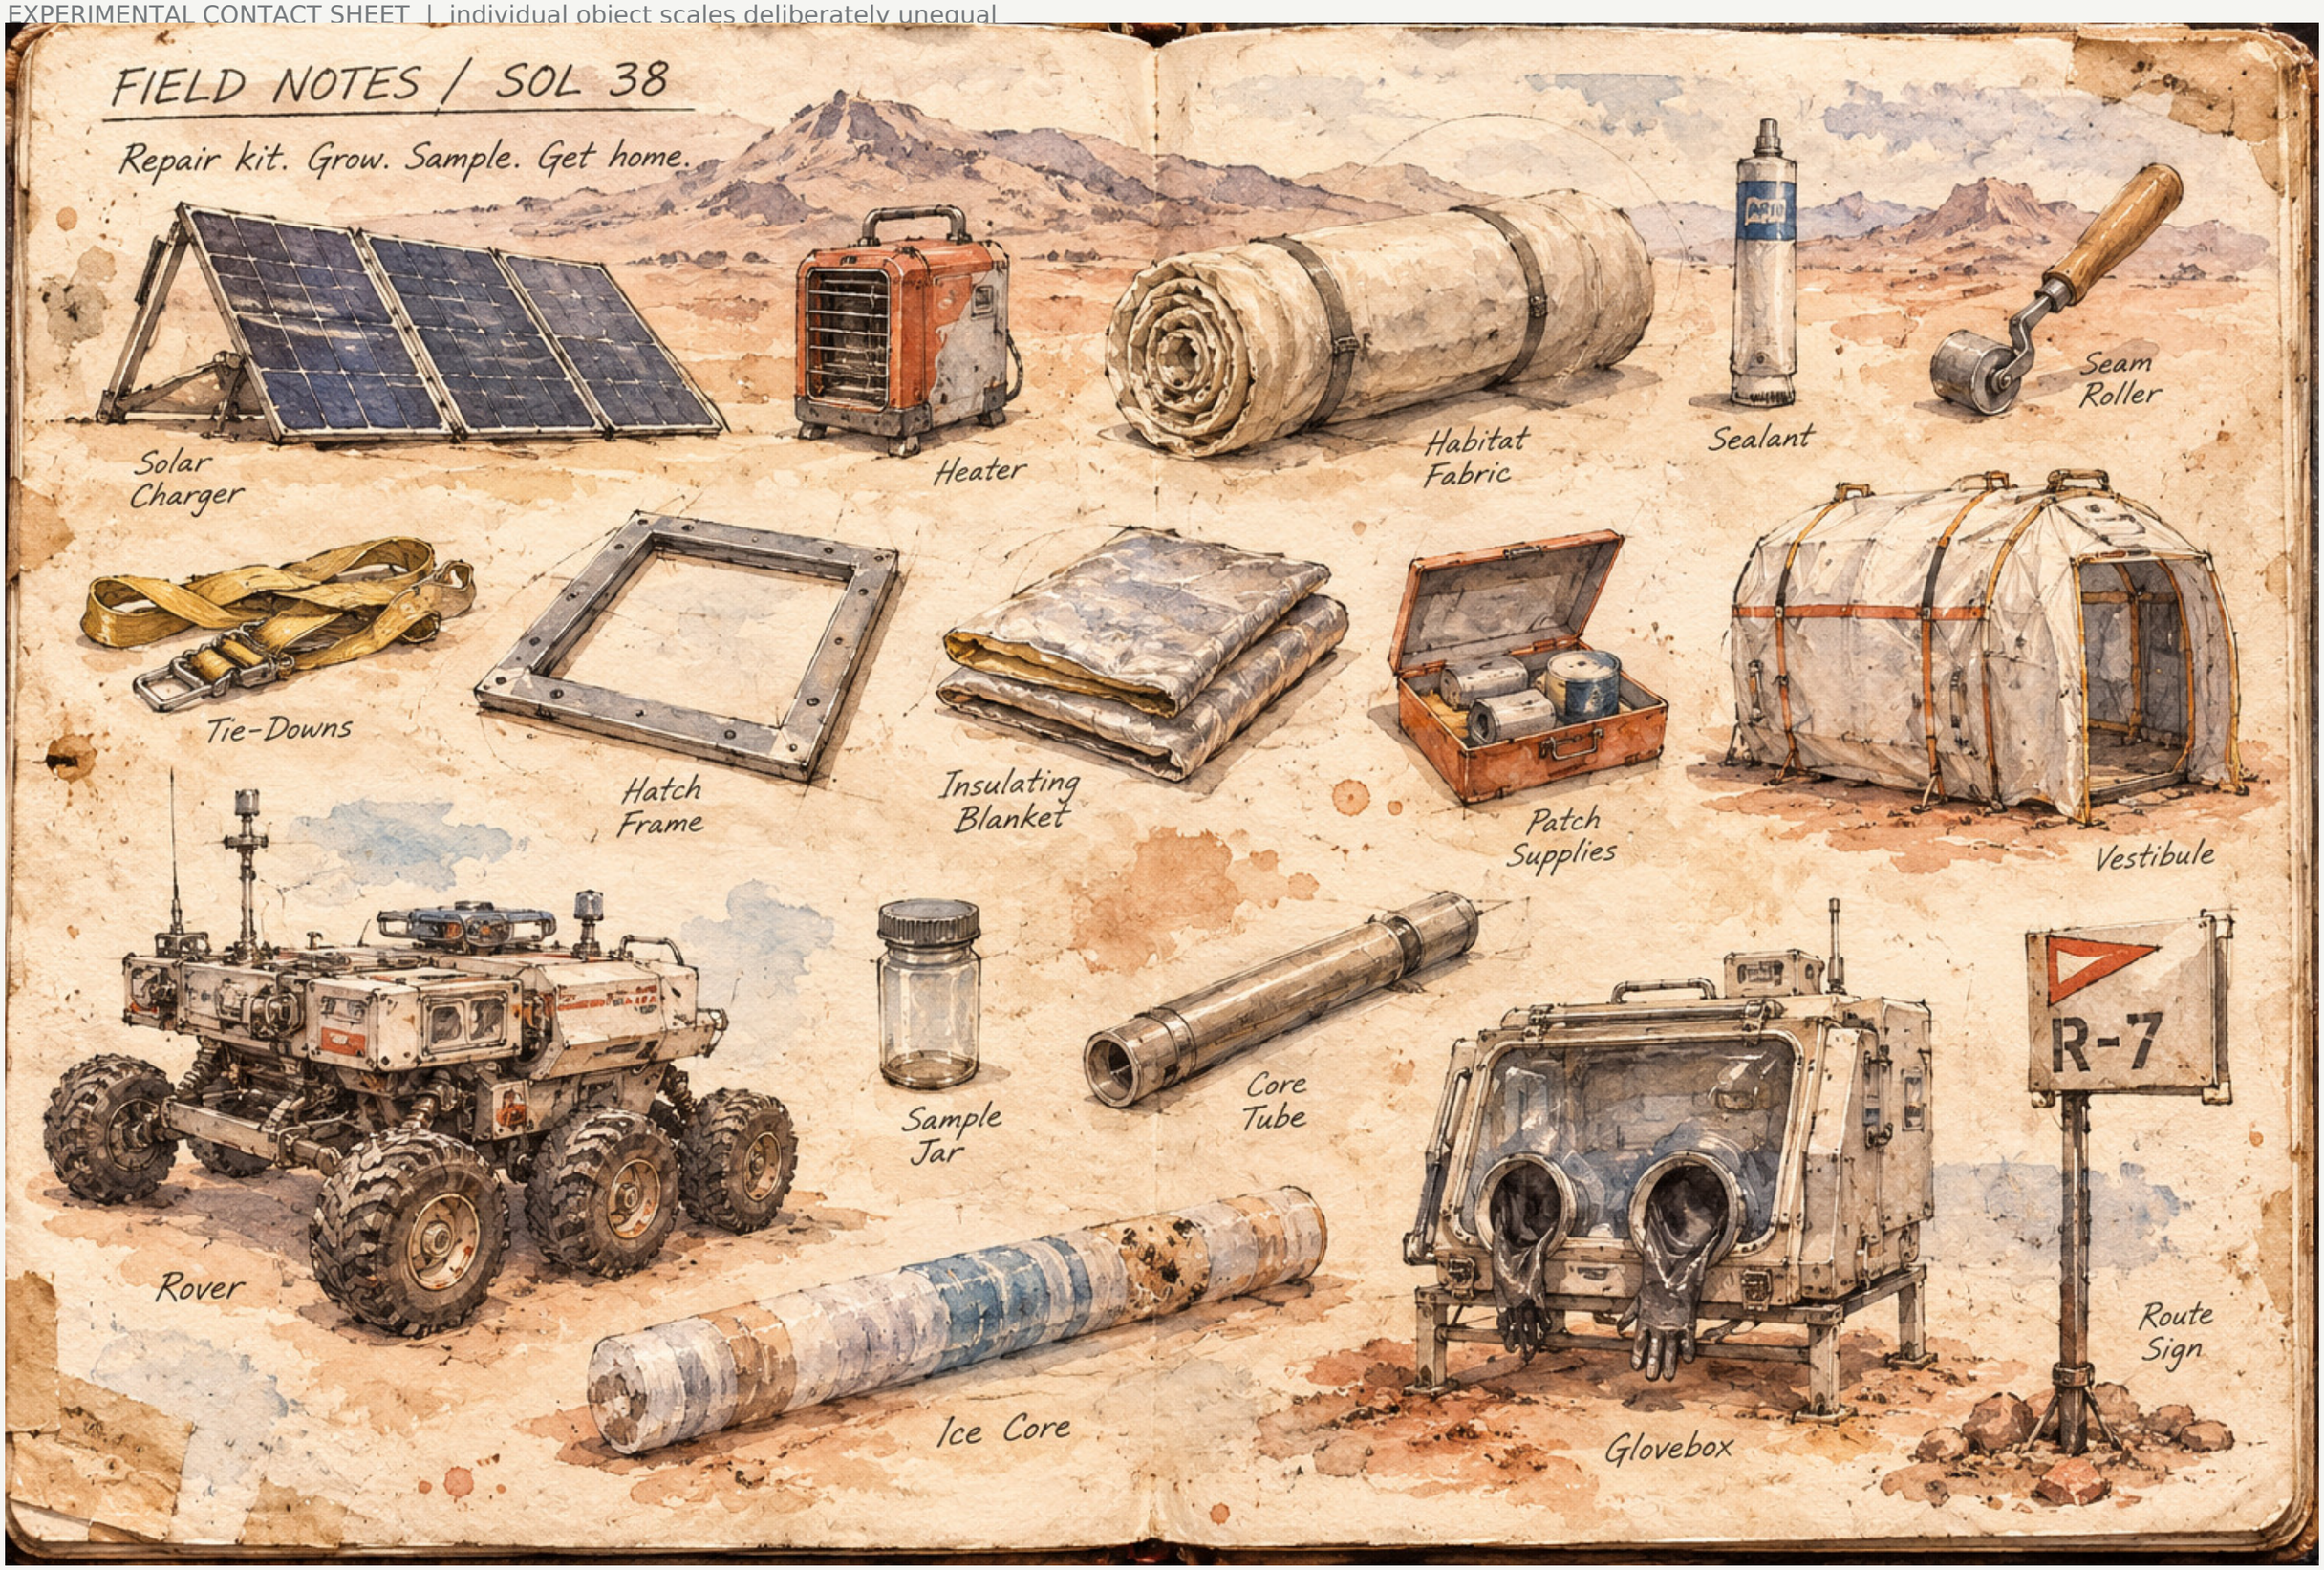

Certified spacecraft equipment plates: ink contours, measured views, sparse warm washes, callouts.

Production consideration: Strong parts-to-assembly storytelling; dimension lines and microtype must be kept OUT of the actual inventory icons.

SOURCE IMAGES: NASA, Project Apollo Technical Diagrams Apollo Lunar Module Documentation

02 / Polar expedition sketchbook

EXPERIMENTAL CONTACT SHEET | individual object scales deliberately unequal

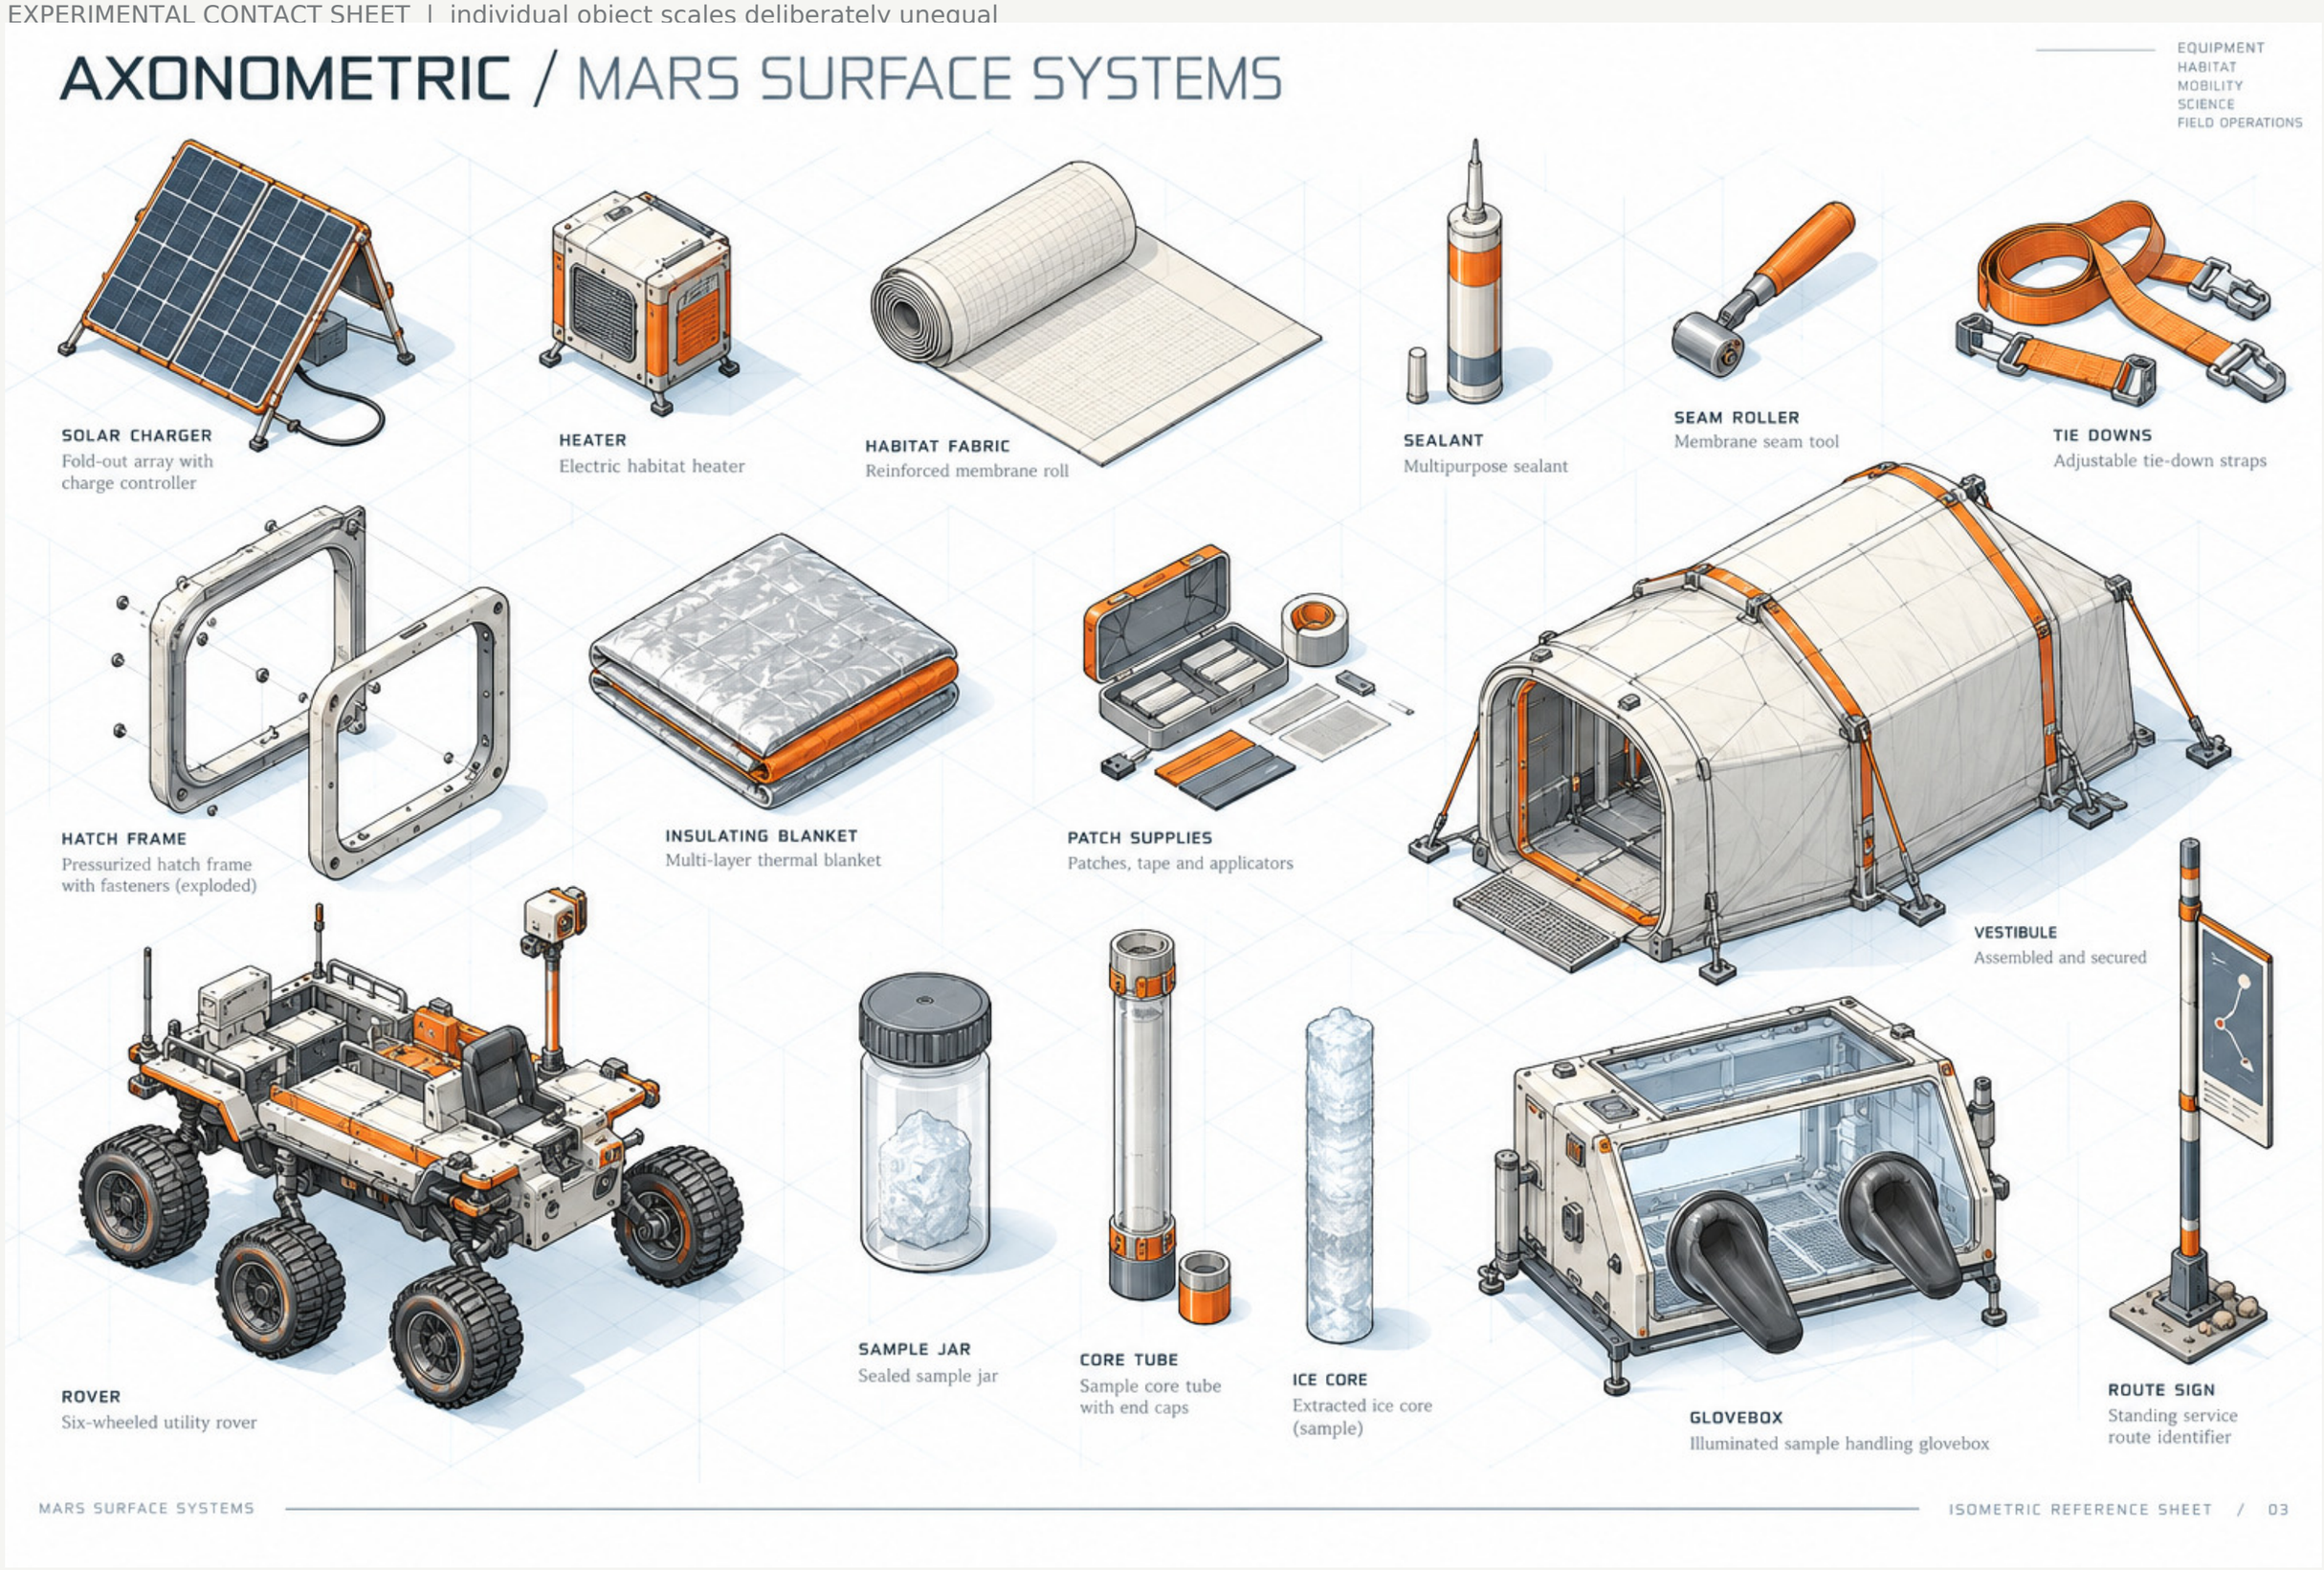

Firsthand expedition notebook: loose pencil, watercolor, weathered paper, observations and scraps.

Production consideration: Perfect for scientific discovery and improvisation; weak small-item contrast and inconsistent viewpoints require care.

SOURCE IMAGES: Natural History Museum, Edward Wilson notebooks National Archives, Russell W. Porter sketches

03 / Architectural / industrial isometric

EXPERIMENTAL CONTACT SHEET | individual object scales deliberately unequal

Strict parallel projection, precise construction lines, exploded subassemblies, white ground and blue grid.

Production consideration: Excellent for compound objects and visible add-ons; rigid viewpoint should not turn every thin object into a tiny mark.

SOURCE IMAGES: Patterson-Kelley, exploded/isometric assembly... The Henry Ford, engineering part drawings

04 / Photorealistic field objects

EXPERIMENTAL CONTACT SHEET | individual object scales deliberately unequal

Physical props photographed in raking Martian daylight: accurate surface materials, real dust and contact shadows.

Production consideration: Immediate material presence; detail and consistent regeneration of 200 components are the major production burdens.

SOURCE IMAGES: NASA/JPL, Perseverance rover components NASA/JPL, 33 Mars sample tubes

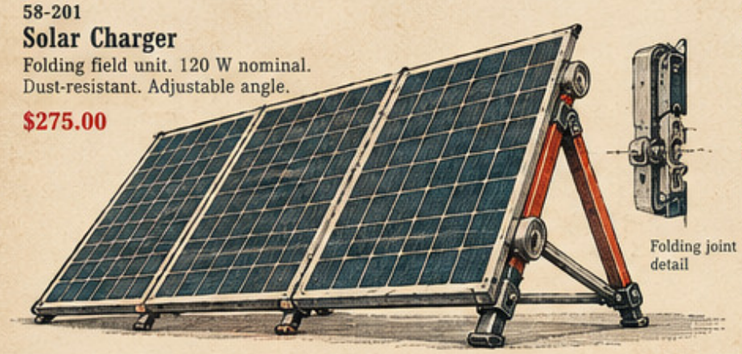

05 / Mid-century industrial catalog

EXPERIMENTAL CONTACT SHEET | individual object scales deliberately unequal

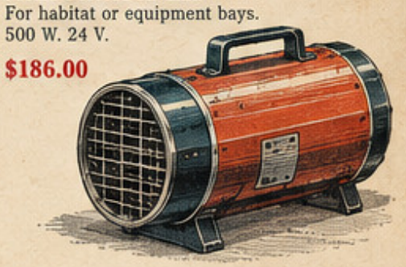

FIELD SERVICE • SPARES & ASSEMBLIES

HABITAT SYSTEMS • MOBILITY EQUIPMENT • SCIENCE TOOLS • SITE INFRASTRUCTURE

58-201
Solar Charger
Folding field unit. 120 W nominal.
Dust-resistant. Adjustable angle.
$275.00

58-202
Heater
Portable forced-air unit.
For habitat or equipment bays.
500 W. 24 V.
$186.00

58-203
Habitat Fabric
Reinforced, multi-layer.
Radiation and tear resistant.
1.5 m width (per roll).
$92.00

58-204
Sealant
Multi-surface.
-40° to +120° C.
310 ml.
$12.00

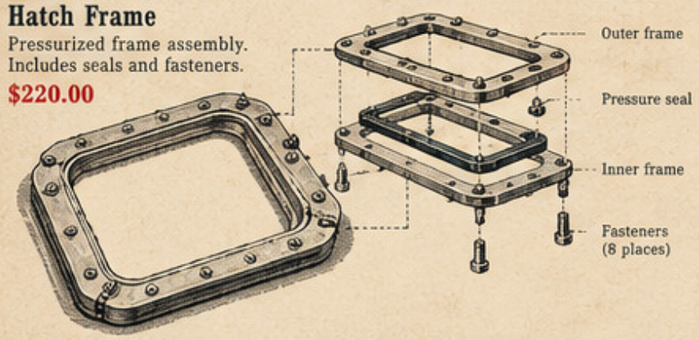

58-205
Seam Roller
For fabric joints.
50 mm.
$24.00

58-206
Tie-Downs
Adjustable straps.
Set of 4.

58-207
Hatch Frame
Pressurized frame assembly.
Includes seals and fasteners.
$220.00

58-208
Insulating Blanket
Multi-layer thermal.
2 m × 3 m.
$68.00

58-209
Patch Supplies
Field repair kit for fabric and panels.
$46.00

Kit includes:
- Fabric patches (various)
- Sealant tape
- Backing plates
- Fasteners
- Application tools
- Instructions

FIELD NOTE: Keep critical spares on hand. Delays on Mars can be costly.

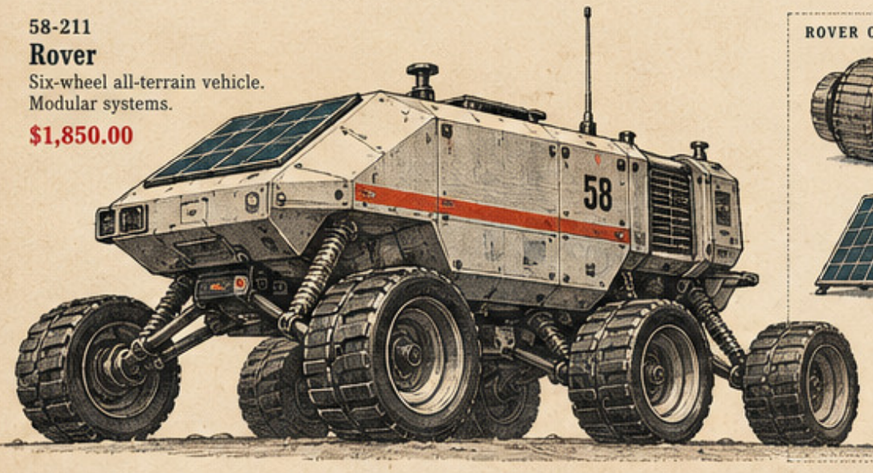

SECTION 2

2-1 Habitat Components
2-7 Mobility Systems
2-11 Sampling Equipment
2-16 Site Markers & Navigation
2-20 Electrical & Thermal
2-24 Tools & Consumables

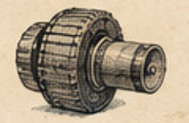

58-210
Vestibule
Pressurized habitat vestibule.
Quick assembly. Fabric over frame.
Connects to standard hatch.
$485.00

58-211
Rover
Six-wheel all-terrain vehicle.
Modular systems.
$1,850.00

ROVER COMPONENTS (PARTIAL)

58-211A
Drive Unit
$420.00

58-211B
Solar Charger (Rover)
$310.00

58-211C
Seat Harness
$68.00

58-212
Sample Jar
Transparent, sealed.
250 ml.
$12.00

58-213
Core Tube
Standard geological sample.
500 mm.
$36.00

58-214
Ice Core
Extracted sample.
Typical section.
$48.00

58-215
Illuminated Glovebox
Sealed enclosure with glove ports.
For sample handling.
$620.00

58-216
Standing Route Sign
Deployable marker for identified routes.
Collapsible for transport.
$78.00

Folded view

1950s service-parts trade literature: engraved machinery, red price stamps, structured numbering, cream stock.

Production consideration: An unusually good fit for a combination game: part identity, assembly relationships and replacement components.

SOURCE IMAGES: Museums Victoria, 1956 industrial equipment c... General Radio Catalog, 1956 (BAMA archive)

06 / Soviet space-age book illustration

EXPERIMENTAL CONTACT SHEET | individual object scales deliberately unequal

1950s-60s illustrated science optimism: poster lithography, cobalt night, vermilion terrain, geometric diagonals.

Production consideration: Gives every discovery a visionary quality; a heroic poster can become too busy around utilitarian small parts.

SOURCE IMAGES: Tekhnika Molodezhi visual history Soviet space artist Andrei Sokolov reference ...

07 / Golden-age science-fiction pulp

EXPERIMENTAL CONTACT SHEET | individual object scales deliberately unequal

1920s-40s magazine art: saturated yellows and reds, fantastically exaggerated but lovingly constructed machines.

Production consideration: Beautiful sense of adventure; treat scale drama and fantasy shape language carefully in a technically grounded story.

SOURCE IMAGES: Science Fiction Encyclopedia, Frank R. Paul Amazing Stories, early cover art gallery

08 / 1970s paperback science-fiction art

EXPERIMENTAL CONTACT SHEET | individual object scales deliberately unequal

Bulky industrial hardware, extravagant painted striping, dense airbrushed mass and cinematic deep-space lighting.

Production consideration: Very strong vehicle and heavy equipment silhouettes; a jar or sealant tube may struggle to sustain its visual weight.

SOURCE IMAGES: Science Fiction Encyclopedia, Chris Foss Science Fiction Encyclopedia, Peter Elson

09 / Star Trek: 1960s television props

EXPERIMENTAL CONTACT SHEET | individual object scales deliberately unequal

Optimistic shipboard prop design: cream molded shells, black details, glowing orange accents, clean stages.

Production consideration: Coherent, approachable devices; the style must be made original rather than using franchise-specific badges and props.

SOURCE IMAGES: Museum of Pop Culture, original series tricor... Star Trek Blueprints, tricorder drawing

10 / Star Wars: worn frontier equipment

EXPERIMENTAL CONTACT SHEET | individual object scales deliberately unequal

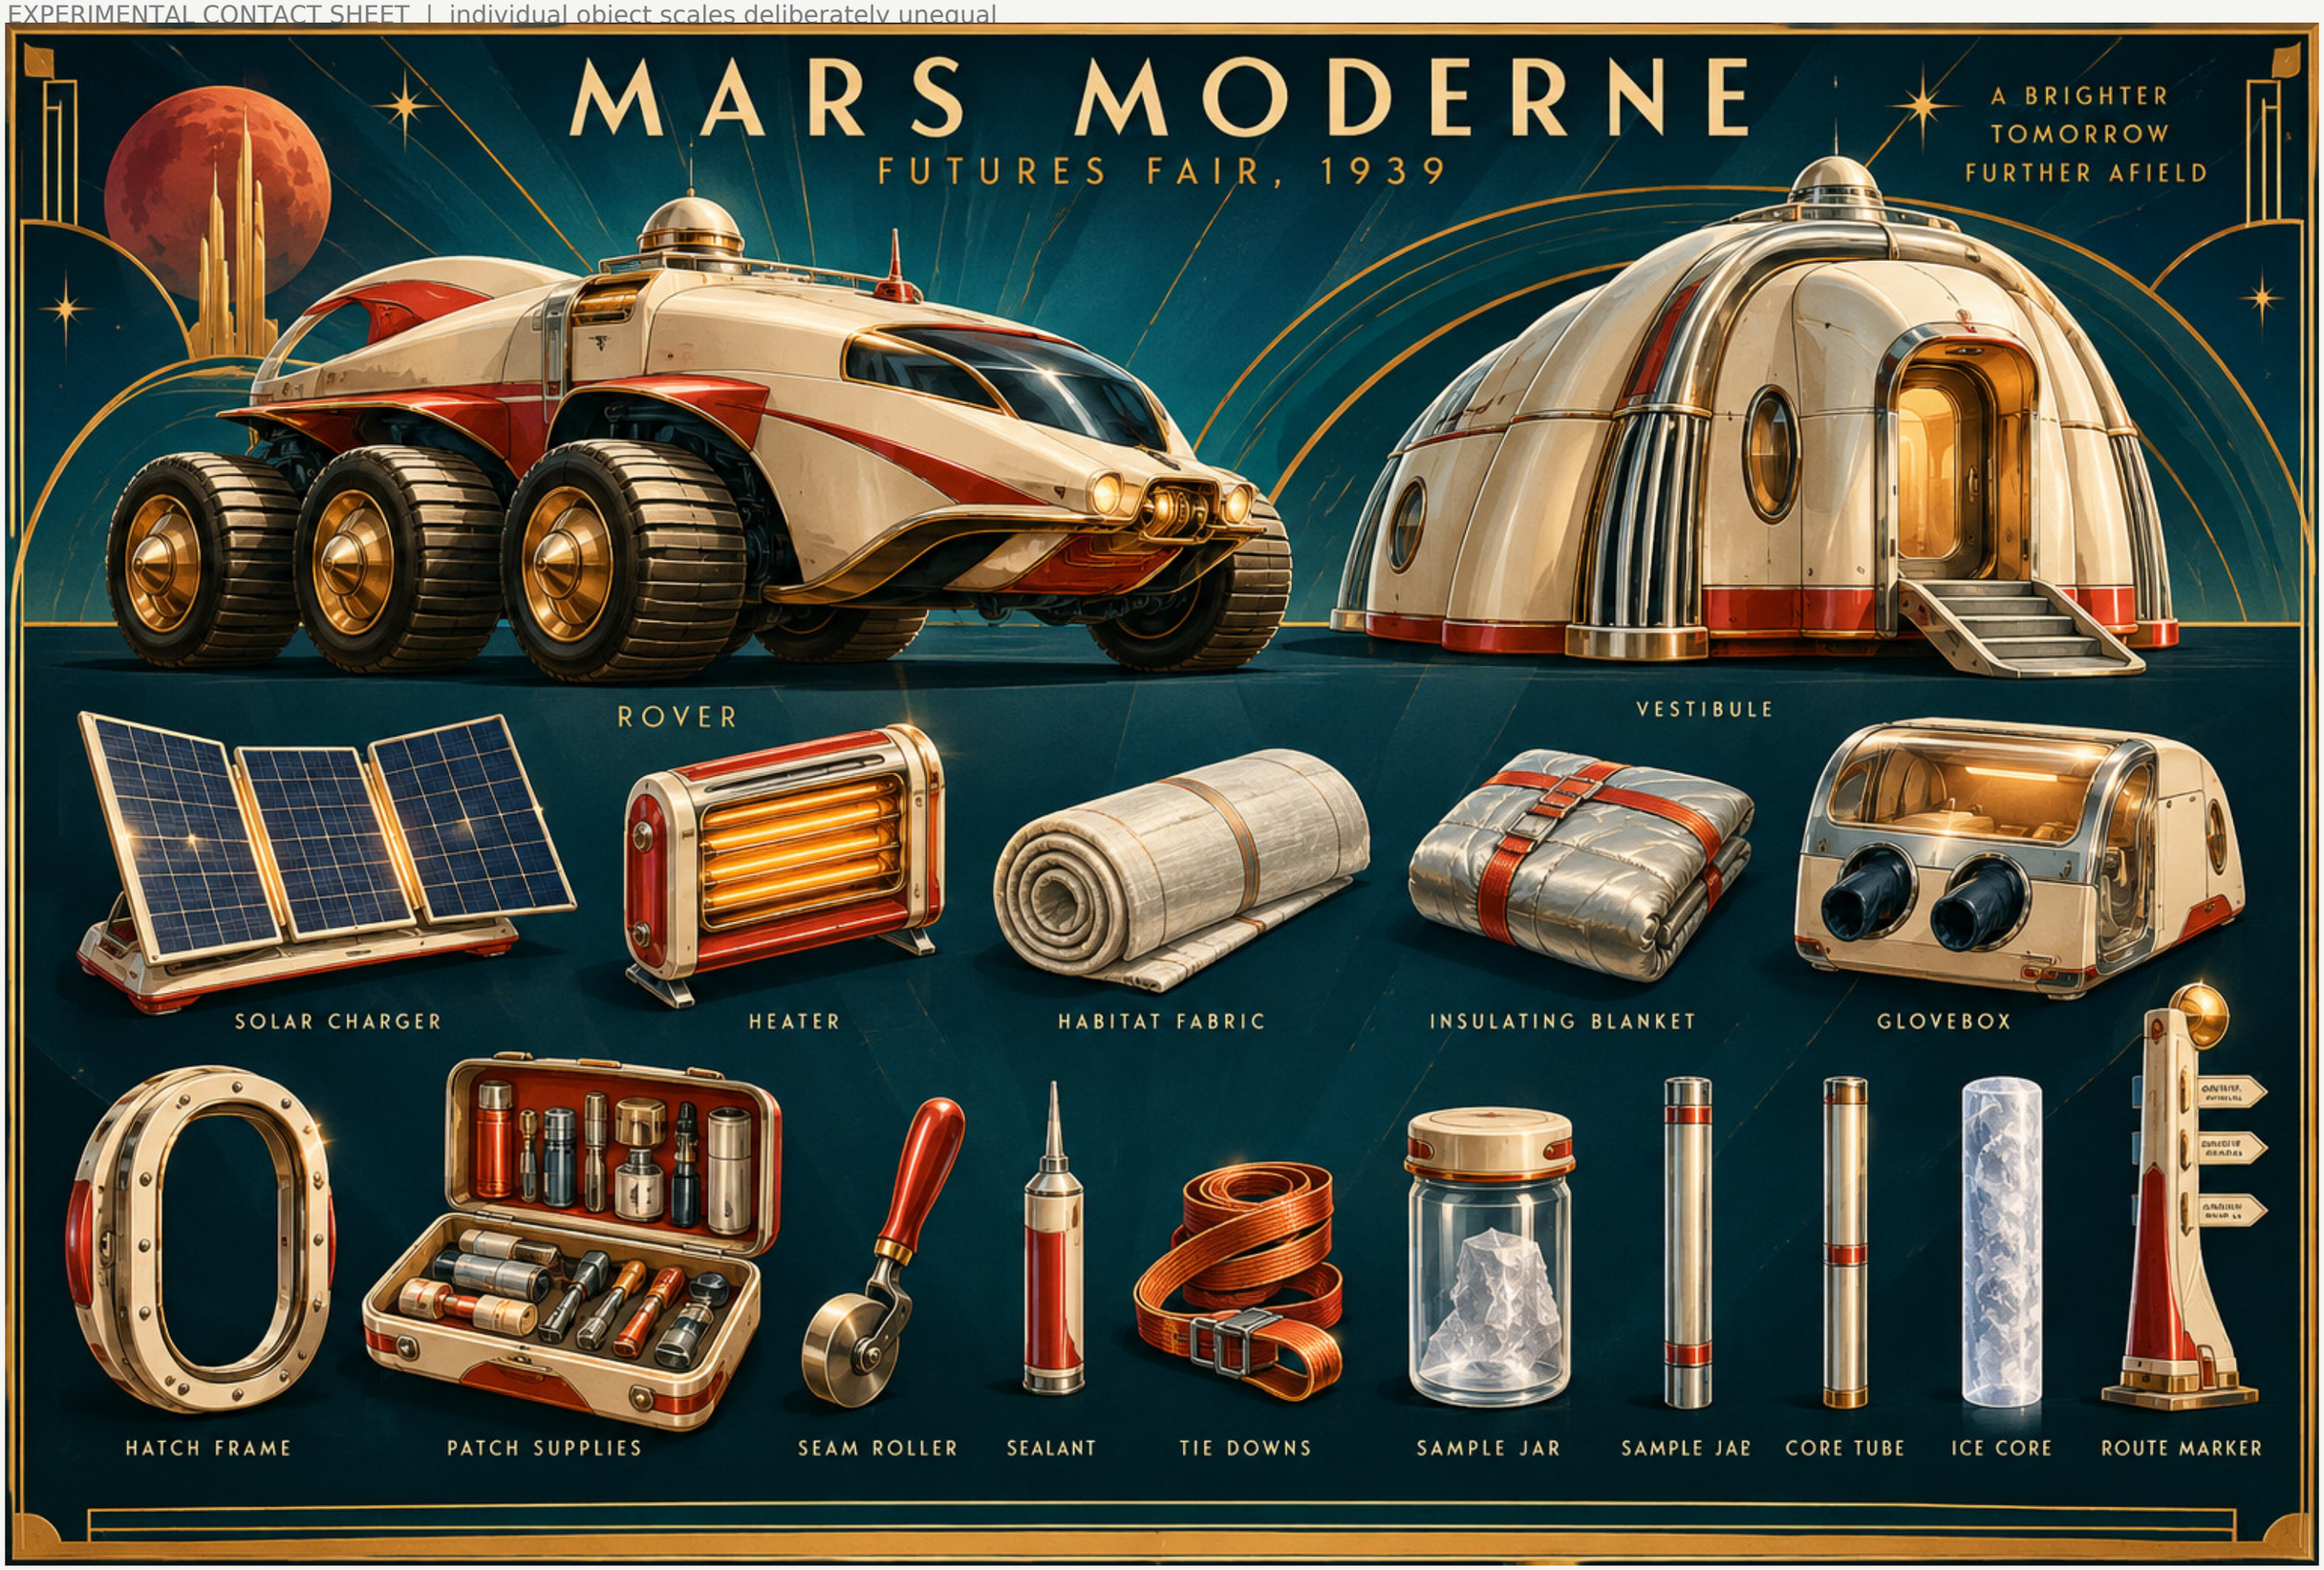

1970s production-painting sensibility: sand, graphite and gouache, grime, repair marks, oversized working machinery.

Production consideration: Excellent fit for survival improvisation; do not let every object become equally brown or every repair look pre-existing.

SOURCE IMAGES: Lucas Museum, Ralph McQuarrie production art American Cinematographer, production design a...

11 / Raygun Gothic / Streamline Moderne

EXPERIMENTAL CONTACT SHEET | individual object scales deliberately unequal

1930s world-fair future: enamel, chrome, sweeping streamlined fins, Deco geometry, lacquered luxury machines.

Production consideration: The most distinctive silhouettes and a strong sense of playful invention; can undermine survival-story plausibility.

SOURCE IMAGES: Norman Bel Geddes, 1939 Futurama design archive Smithsonian, Arthur Radebaugh future illustra...

12 / 2001: A Space Odyssey industrial modernism

EXPERIMENTAL CONTACT SHEET | individual object scales deliberately unequal

Clinical 1968 aerospace modernism: precise white shells, pure black fields, subtle red-orange safety markings.

Production consideration: Wonderful hardware discipline and hierarchy; austere object photos can become visually repetitive across 200 items.

SOURCE IMAGES: Museum of the Moving Image, 2001 production d... BBC Arts, Harry Lange visual design
